

1. REIKU GmbH – Durability and long operating life (2005-07-11)

Particularly for extreme dynamic movements, a **cable-protection-system of thermoplastic polyurethane** is developed. It has a unique geometry profile for varied applications, designed to harmonize with a wide range of accessories programm.

Therefore, a compact, as well as a highly flexible cable-package can be made. The installation is done with special grip clamps which are available in 2 types of fastening. By using „REIKU-Protector“, an additional higher shock- and abrasion-protection is gained and it is possible to join the existing conduit with another conduit of different types.

At installation, tough but flexible cable-protection conduits with the easy-to-assembly and quick-to-fit connectors, as well as the stackable and joinable system-support are seen in the application. Thus wirings and cable-harness can be protected optimumly.

The manufacturer is certified according to DIN EN ISO 9001.2000 and produces cable-protection-systems for robotic, rail industry and machine building.
